TUGAS STRUKTUR DATA DAN ALGORITMA STUDI KASUS ADT LINKED LIST

Oleh : ARSAL FADILAH 201524036

POLITEKNIK NEGERI BANDUNG JURUSAN TEKNIK KOMPUTER D-4 TEKNIK INFORMATIKA 2021

```
    Pseudocode

   Struktur data:
   typedef char infotype;
   typedef struct tElmtlist *address;
   typedef struct tElmtlist {
           infotype info;
           address next;
   }ElmtList;
   typedef struct {
           address First:
   }List;

    Create List

           Deklarasi:
           Algoritma:
           Procedure CreateList(Input/Output List L)
           Begin
                  L^{\wedge}.First = Nil
           End
       O Insert Huruf Pertama, value 'u'
           Deklarasi:
           Addres P
           Algoritma:
           Procedure InsertFirst(Input.Output List L, Infotype X)
           Begin
                  P ← alloc(1, address)
                  If P!= Nil then
                          P^.Info ← X
                          P^.Next ← L.First
                          L.First ← P
                  End If
           End
       O Insert value 'c' setelah huruf pertama
           Deklarasi:
           Addres P, Last
           Algoritma:
           Procedure InsertLast(Input.Output List L, Infotype X)
           Begin
                  P ← alloc(1, address)
                  If P!= Nil then
                          P^.Info ← X
                          If L.First == Nil then
                                 P^.Next ← L.First
                                 L.First ← P
                          Else then
                                 Last ← L.First
                                 While Last^.Next != Nil
                                         Last ← Last^.Next
```

```
End While
                  Last^.Next ← P
                  End If
           End If
   End
O Insert value 'h' setelah huruf kedua
   Deklarasi:
   Addres P, Last
   Algoritma:
   Procedure InsertLast(Input.Output List L, Infotype X)
   Begin
           P ← alloc(1, address)
          If P!= Nil then
                  P^{\wedge}.Info \leftarrow X
                  If L.First == Nil then
                         P^.Next ← L.First
                         L.First ← P
                  Else then
                         Last ← L.First
                         While Last^.Next != Nil
                                 Last ← Last^.Next
                         End While
                  Last^.Next ← P
                  End If
           End If
   End
O Insert value 'i' setelah huruf ketiga
   Deklarasi:
   Addres P, Last
   Algoritma:
   Procedure InsertLast(Input.Output List L, Infotype X)
   Begin
           P ← alloc(1, address)
          If P!= Nil then
                  P^.Info ← X
                  If L.First == Nil then
                         P^.Next ← L.First
                         L.First ← P
                  Else then
                         Last ← L.First
                         While Last^.Next != Nil
                                Last ← Last^.Next
                         End While
                  Last^.Next ← P
                  End If
          End If
   End
```

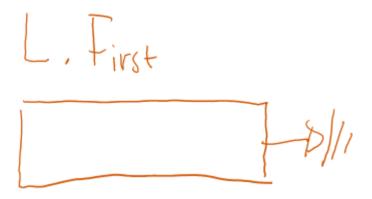

```
O Insert value 'n' setelah huruf pertama
   Deklarasi:
   Algoritma:
   Procedure InserAfter(Input.Output List L, address P, address Prec)
   Begin
          P^.Next ← Prec^.Next
          Prec^.Next ← P
   End
O Delete value 'i' pada elemen list
   Deklarasi:
   Address Last, PrecLast
   Algoritma:
   Procedure DeleteLast(Input/Output List L, input/output address P)
   Begin
          Last ← *(L.First)
          If Last^.Next == Nil then
                 Last ← *(L.First)
                  *(L.First) ← *(L.First)^.Next
                 Last.Next ← Nil
          Else then
                 PrecLast ← Nil
                  While Last^.Next != Nil then
                         PrecLast ← Last
                         Last ← Last^.Next
                 End While
                  *P ← Last
                 PrecLast^.Next 	← Nil
          End If
   End
O Insert value 'p' di awal list Insert value 'a' setelah huruf 'h'
   Deklarasi:
   Algoritma:
   Procedure InserAfter(Input.Output List L, address P, address Prec)
   Begin
          P^.Next ← Prec^.Next
          Prec^.Next ← P
   End

    Show semua elemen karakter

   Deklarasi:
   Addres P
   Algoritma:
   Procedure PrintInfo(Input List L)
```

```
Begin
           P ← L^.First
          If P == Nil then
                  Write (layar) "List Kosong"
           Else
                  Do then
                         Write (layar) P^.info
                         P = P^{\wedge}.Next
                  While P!= Nil
           End If
   End
O Cari huruf 'h' pada list, dan tampilkan posisi elemen tersebut pada list. Jika ada tampilkan
   posisinya, jika tidak ada tampilkan "tidak ada"
   Deklarasi:
   Int idx ← 1
   Algoritma:
   Function IdxNList(Input List L, infotype x): int
   Begin
           While L.First != Nil And L.First^.Info != x then
                  Idx++
                  L.First ← L.First^.Next
           End while
          If L.First^.info != x then
                  Return 0
           Else
                  Return idx
           End if
   End
O Delete semua elemen list karakter
   Deklarasi:
   Address X
   Algoritma:
   Procedure DelAll(Input/Output List L)
   Begin
           While L.First != Nil then
                  DeleteLast(L, X)
           End while
   End
```

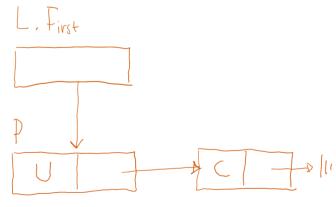

- Representasi/Ilustrasi Gambar Linked List
 - Create List

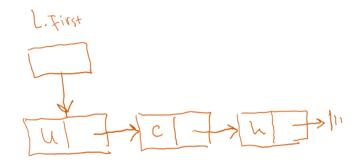

O Insert Huruf Pertama, value 'u'

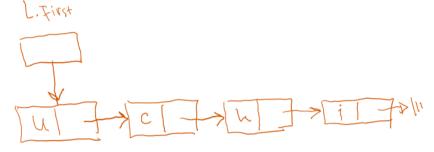

O Insert value 'c' setelah huruf pertama

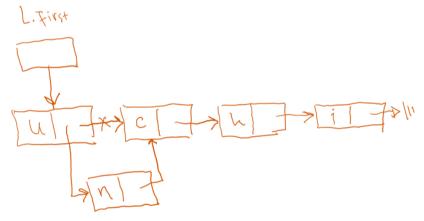

O Insert value 'h' setelah huruf kedua

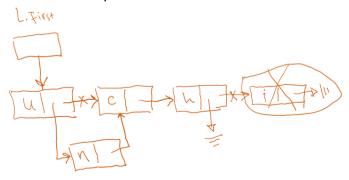

O Insert value 'i' setelah huruf ketiga

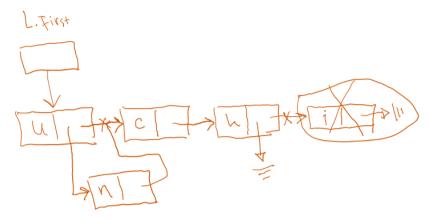

O Insert value 'n' setelah huruf pertama

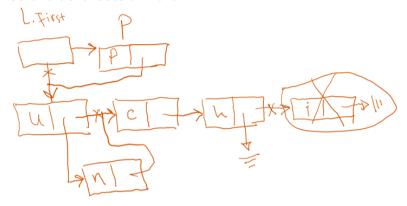

O Delete value 'i' pada elemen list

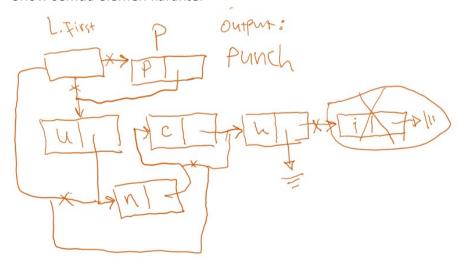

O Insert value 'p' di awal list

O Insert value 'a' setelah huruf 'h'

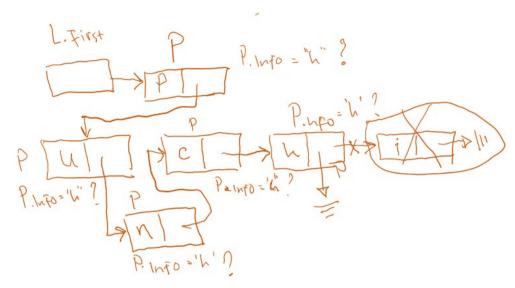

O Show semua elemen karakter

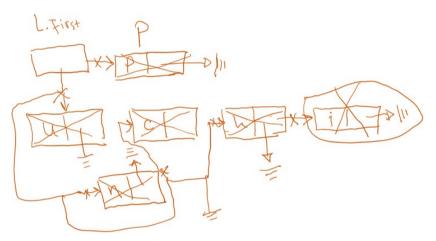

Cat: L.First sebagai parameter input saja

O Cari huruf 'h' pada list, dan tampilkan posisi elemen tersebut pada list. Jika ada tampilkan posisinya, jika tidak ada tampilkan "tidak ada"

O Delete semua elemen list karakter

//Hasil Running
